ColourLoc - Solution Dyed

Introducing Sensitex 6000 the revolutionary new fibre system engineered for today's environment and lifestyle. Being solution dyed, Sensitex 6000 resists harsh cleaning better because the colour permeates the entire cross-section of the fibre.

Stain Resistant - Fade resistant

Sensitex 6000 is an inert fibre, meaning that no standard domestic product can penetrate the fibre. Since the fibre is both coloured and UV blocked at the extrusion stage it is resistant to fading even under harsh conditions.

Prewashed to stay clean longer

This solution dyed carpet is Prewashed to remove the processing oils that attract soil. Pre-washing makes the carpet easier to clean and helps prevent accelerated soiling known as Rapid Resoil.

Anti-Microbial Protection

Anti-Microbial Protection inhibits the growth of bacteria, moulds and mildew and eliminates odours for lasting freshness. Unlike temporary topical treatments, the Anti-Microbial is built into the backing laminate for permanent protection where it matters most.

Anti-Shock

Sensitex 6000 has an anti-static component built into the fibre to combat increasing static build-up generated by growing trends toward computers and electronic equipment in our homes.

AIRTEX green

AIRTEX green is a new and improved backing system. In your home, spills and accidents no longer spell disaster. Carpet with AIRTEX green will not harbour or promote the growth of bacteria nor will it omit odours.
